

Point-by-Point Response to Editorial Comments

VOUCH: Anytime-Valid Certificates for Machine Unlearning
via Paired-Canary Hypothesis-Betting

Manuscript ID: 4bbec415-ab8d-4923-a2b3-08f87b3b7b49

Quang-Vinh Dang — British University Vietnam

16 July 2026

Dear Editors,

We thank the Editorial Office and the Editor-in-Chief for the technical check and for identifying the missing Contribution Information Sheet. We have addressed both points in full; our point-by-point response follows, with each editorial comment quoted verbatim and our corresponding action described immediately below it.

Comment 1 (Technical Check).

“Please add the following required information on the first page of your main manuscript file, right before the Abstract and keywords: A concise and informative title; the full name(s) of the author(s); the affiliation(s) and address(es) of the author(s) — including the individual city and country information; the e-mail address, telephone and fax numbers of the corresponding author.”

Response. We have revised the first page of the manuscript accordingly. It now presents, immediately before the Abstract:

- the full title, *VOUCH: Anytime-Valid Certificates for Machine Unlearning via Paired-Canary Hypothesis-Betting*;
- the full name of the (sole) author, Quang-Vinh Dang;
- the affiliation and complete address, British University Vietnam, Ecopark, Hung Yen, Vietnam;
- the corresponding author’s e-mail address, vinh.dq4@buv.edu.vn, and telephone number, +84 768 496 935.

No fax number is provided, as the corresponding author does not have one; fax is not in active use in our institution or country. We trust the e-mail and telephone contact supplied satisfies the intent of this requirement.

Comment 2 (Editor-in-Chief).

“Your manuscript ... cannot currently be assessed because the mandatory Contribution Information Sheet is missing ... Please kindly resubmit the paper within 14 days with the CIS added in a separate file or as part of the cover letter.”

Response. We have prepared the Contribution Information Sheet and included it as part of the cover letter, immediately following the letter’s closing, per the option offered in this comment. It answers in full the four required questions: (i) the main claim of the paper and its importance to the machine learning literature; (ii) the theoretical, simulation, and end-to-end empirical evidence supporting the claim, stated precisely; (iii) the papers by other authors that make the most closely related contributions and how this paper relates to them; and (iv) confirmation that no part of this paper has been published previously in any venue.

In preparing the sheet we also noted the guideline’s remark that reviewers will expect these answers to already be part of the paper’s introductory material. On review, the Introduction already stated the main claim and the three obstacles VOUCH addresses (Comment 2, question i) and Section 2 already gave a detailed, explicit comparison against the closest related work

(question iii), but the Introduction’s discussion of supporting evidence (question ii) described the empirical study only qualitatively, without its headline quantitative results. We have therefore added a paragraph to the Introduction (immediately before the statement of contributions) that states these results directly — the 2,000-seed calibration outcomes, the measured size of both composition failures, detection and certification rates across the benchmark study, the utility collapse under gradient ascent, and the per-certificate computational cost — so that this evidence is now visible in the paper’s own introductory material, consistent with the reviewers’ expectation and not only in the supplementary sheet.

We believe these revisions fully address both points raised, and we thank the Editorial Office and the Editor-in-Chief for their guidance.

Sincerely,
Quang-Vinh Dang
British University Vietnam
